

Item	Link	Description
Plinky	https://plinkysynth.com/	It's a plinky case
Battery	https://www.amazon.com/dp/B08215B4KK	Other batteries will probably work, I happened to already have this one.
Battery management board	https://www.amazon.com/dp/B09YD5C9QC	Other BMS boards will NOT work, the Plinky draws >1 amp, you need a board that can do 2 amps
Power switch	https://www.amazon.com/dp/B01N2U8PK0	Any switch will work if it fits
Heat-set inserts	https://www.amazon.com/dp/B0CLKDPN65	You need 4x m3 for the Plinky itself and 2x m2.5 for the battery board
Dupont connectors	https://www.amazon.com/dp/B0B11RLGDZ	To connect the battery board to the Plinky's Eurorack connector
Misc		You will also need some wire to make connections and two m2.5 screws to hold the battery board in place, as well as some tape or something to stick the battery in place
